

SunChazer Advertisement Presentation Script

Aryan (Opening)

Good morning respected teacher and my dear friends.

We are Aryan Sahani, Vedant Pawar, Rishabh Jha, Vishnu and Tanmay.

Today, we are presenting our advertisement for **SunChazer**, an intelligent solar tracking system.

Have you ever noticed that ordinary solar panels stay fixed in one direction while the Sun keeps moving? Because of this, a large amount of solar energy is wasted.

SunChazer solves this problem. It automatically tracks the Sun throughout the day and even moves to a better location when sunlight is blocked. This helps it collect up to **40% more energy** than a normal fixed solar panel.

Our slogan is: **Every Ray Counts.**

Now, I would like to invite Vedant to tell you about the amazing features of SunChazer.

Vedant Pawar

Thank you, Aryan.

SunChazer is a smart and eco-friendly product with many useful features. It has dual-axis solar tracking, a smart mobile rover, and works fully automatically. It is energy-efficient, easy to use, and suitable for homes, schools, farms and industries. With SunChazer, we can produce more clean energy and reduce electricity costs. Now I invite Rishabh to explain the engineering behind our product.

Rishabh Jha

Thank you, Vedant.

On our poster, you can see the engineering design of SunChazer. The system uses solar panels, servo motors, a microcontroller and a mobile rover. It continuously checks the sunlight and changes its position to collect the maximum possible energy. You can also scan the QR code to know more about our project. Now I invite Vishnu.

Vishnu

Thank you, Rishabh.

We are also offering the SunChazer Home Edition at a special launch price of Rs. 24,999. Customers will receive free installation, a 2-year warranty, and free maintenance for the first 100 customers. It is a smart investment for a greener and brighter future. Now I invite Tanmay for the conclusion.

Tanmay (Conclusion)

Thank you, everyone.

SunChazer is not just a product—it is a step towards a cleaner and smarter future. By using renewable energy wisely, we can save electricity and protect our environment. Remember our slogan: **Every Ray Counts.**

Thank you, and have a wonderful day!
